

RADIO 100

Solar Powered Radio
Energy Efficient Entertainment
SW / AM / FM, USB Stick / SD Card

The Fosera solar radio is optimized for low energy consumption without compromising the sound quality. The radio comes with an AUX IN and can be used as a loudspeaker for cell phones or MP3 storages such as USB flash memory sticks or SD cards.

The radio can be powered not only by both battery boxes, LSHS and PSHS, but by any of Fosera's torches. This fact, combined with its small size and light weight, turns the radio into the perfect portable entertainment appliance.

Furthermore, an internal battery for the radio might be purchased, achieving even greater independence from power supplies. This battery can be similarly charged with the battery boxes or torches.
